Professional Summary

Software Developer experienced in backend development, workflow automation, data processing, and enterprise application support. Focused on building reliable solutions that improve operational efficiency and reduce manual effort.

Skills

Languages: C++, Python, Java, C#, JavaScript, TypeScript, and SQL.
Backend: Node.js, ASP.NET, FastAPI, Flask, and REST APIs.
Frontend: React, HTML5, CSS3, Tailwind CSS, Material UI, and Three.js.
Databases: Microsoft SQL Server, PostgreSQL, and Firebase Realtime Database.
Tools and Platforms: Git, GitHub, Docker, GitHub Actions, Google Cloud Platform, Visual Studio, and VS Code.
Libraries and Concepts: pandas, NumPy, Matplotlib, scikit-learn, XGBoost, OOP, Data Structures, Algorithms, System Design, and Software Architecture.

Experience

Seatrium Mumbai, Maharashtra, India
Assistant Engineer – Software Development *July 2024 – Present*

- Develop internal applications and automation solutions using Node.js, React, TypeScript, C#, SQL, and REST APIs.
- Automated SmartPlant P&ID object selection and data extraction, reducing manual interaction and improving processing accuracy.
- Developed Excel-based automation for creating selected SmartPlant Electrical objects and their required associations.
- Built data-import, validation, and transformation workflows, achieving approximately **15–20% faster task completion**.
- Develop a Pad Eye design application supporting structured inputs, 2D drawings, 3D visualization, and engineering workflows.
- Implemented interactive 2D and 3D previews using HTML5 Canvas, Three.js, and reusable geometry modules.
- Support cross-platform data consistency across SmartPlant P&ID, Electrical, Instrumentation, and 3D systems.
- Develop and enhance Excel macros for repetitive data-processing and project-support activities.
- Perform root-cause analysis, defect resolution, application testing, and production troubleshooting.
- Prepare requirement documents, architecture diagrams, workflow definitions, and technical analysis materials.

Digital Engineer – Graduate Engineer Trainee *January 2024 – June 2024*

- Developed internal utilities using C# to support operational workflows and repetitive activities.
- Integrated software solutions into existing processes supporting digital-transformation initiatives.
- Analyzed manual workflows and identified opportunities for automation and process improvement.

Projects

CanvasCraft – Digital Whiteboard | *React, Canvas, Vite, Tailwind CSS* July 2026 – September 2026

- Developed an interactive digital whiteboard using HTML5 Canvas APIs and modular JavaScript.
- Implemented shapes, text, sticky notes, selection, resizing, and object manipulation.
- Added 10%–500% zoom, panning, undo and redo, local storage, and PNG export.

Geo-Location Emergency Ambulance Booking Service | *Android, Java, Firebase* July 2022 – February 2023

- Developed an emergency application connecting patients, ambulance drivers, and hospital teams.
- Integrated Google Maps and GPS services for routing and real-time location tracking.
- Used Firebase for booking requests, driver assignments, notifications, and status updates.

Education

Punyashlok Ahilyadevi Holkar Solapur University Solapur, Maharashtra, India
Bachelor of Technology in Computer Science *March 2019 – March 2023*
Maharashtra State Board Mumbai, Maharashtra, India
Higher Secondary Certificate – Science *March 2018 – February 2019*
Maharashtra State Board Mumbai, Maharashtra, India
Secondary School Certificate *February 2016 – March 2017*
